

Definitions and Issues with RAMS Topography and the Vertical Grid Structure

- **New topographic representations**
- *Marty Bell*
- **Reformulation of diffusive horizontal gradients**
- *Mike Weissbluth*
- **Shaved vertical coordinate system**
- *Bob Walko*

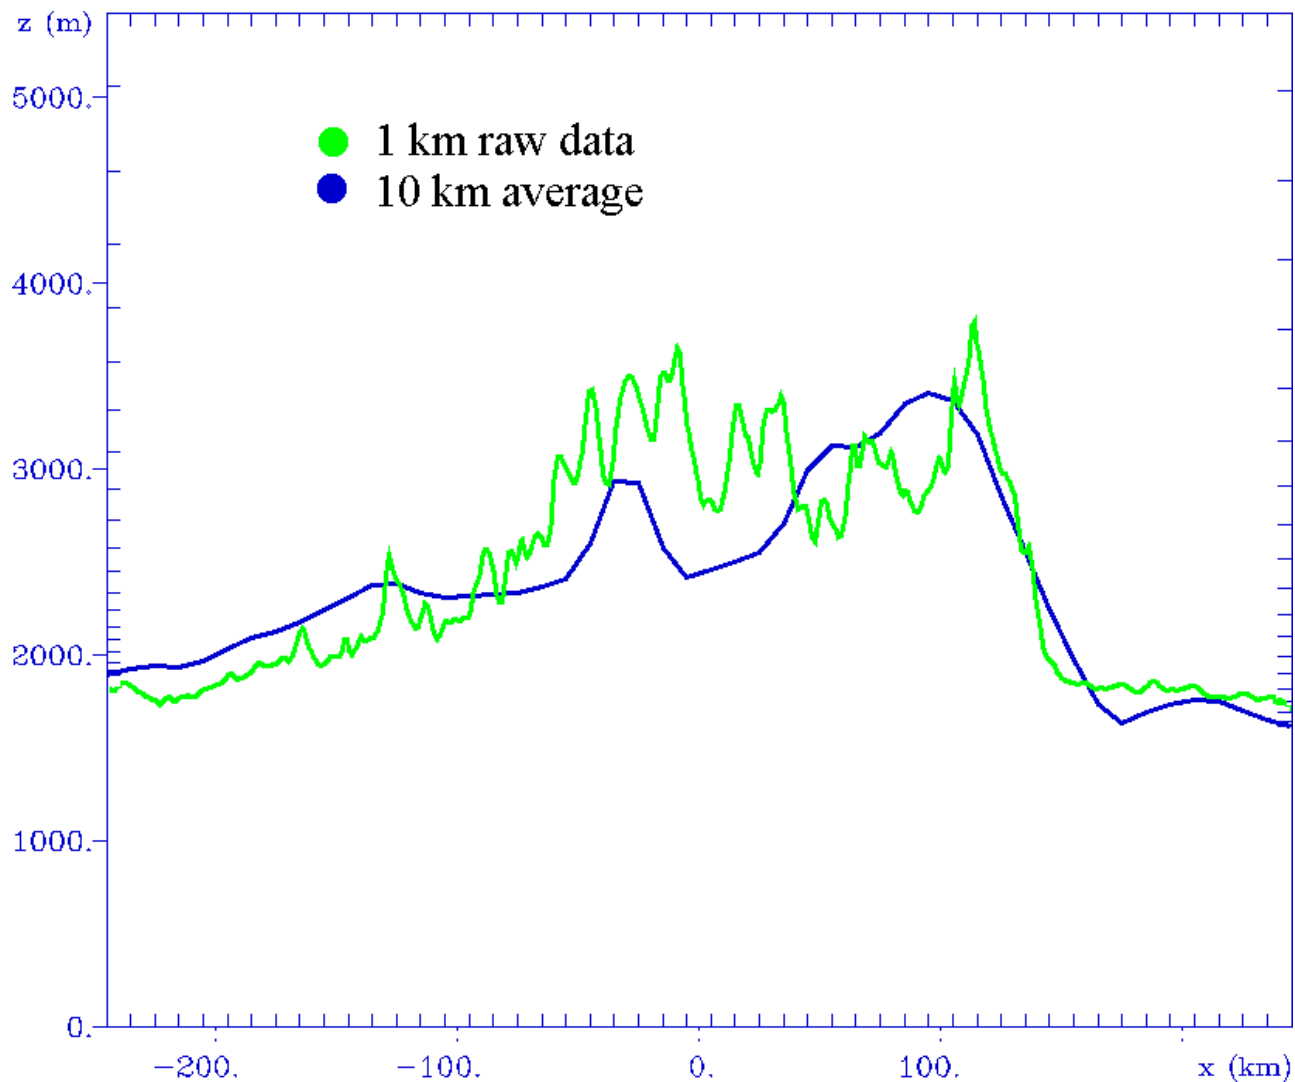

Topography Schemes

- **Average**
- **Silhouette**
- **Envelope**
- **Reflected Envelope**
- **Sub-Grid**

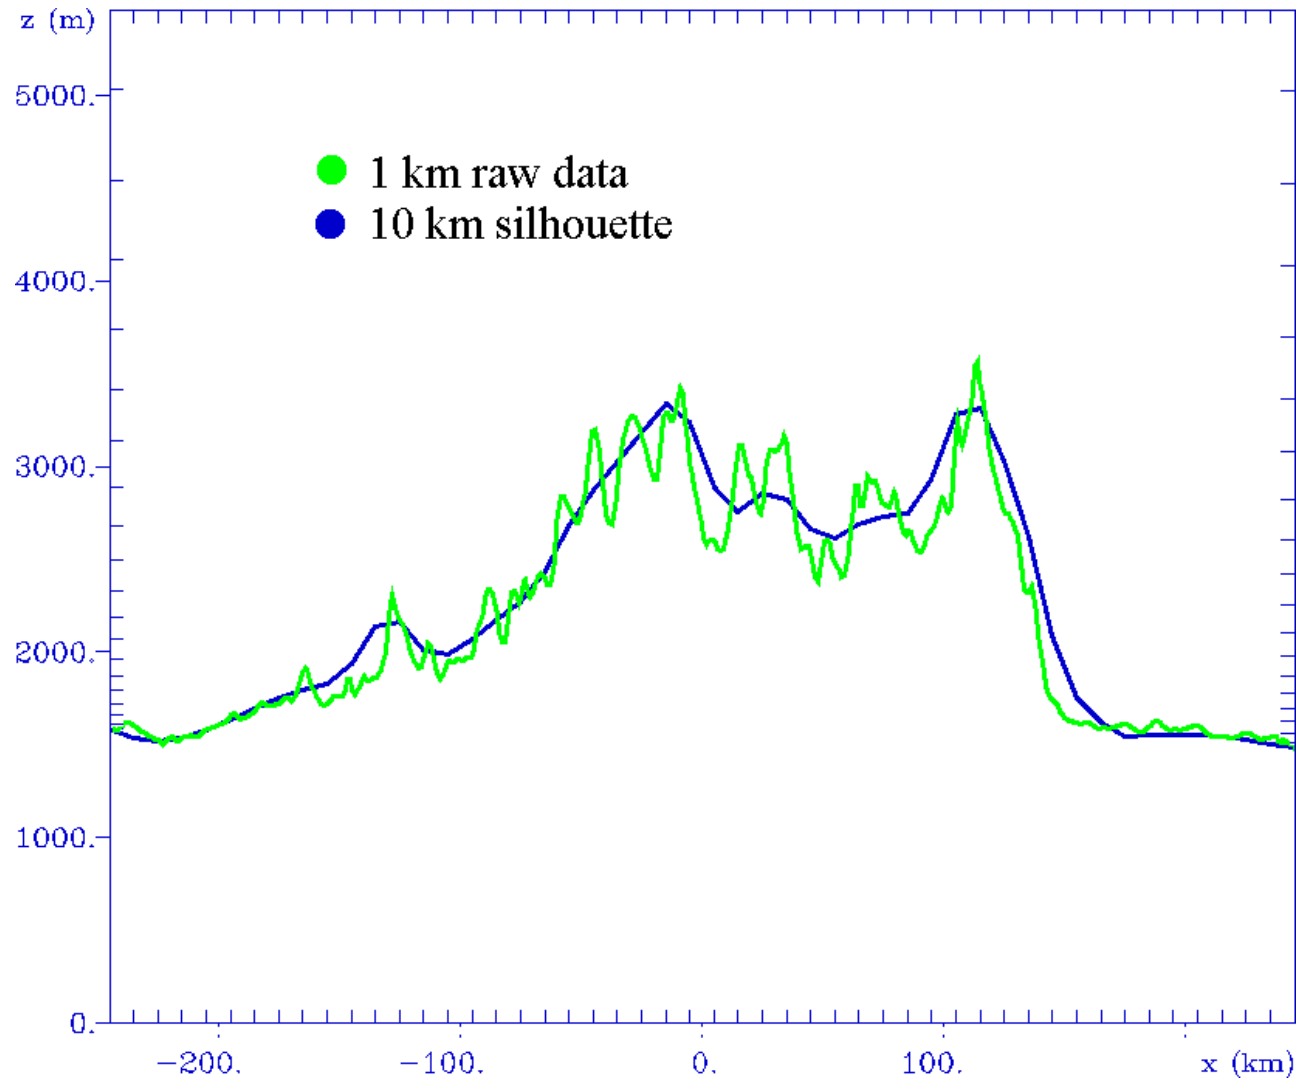

Average Topography

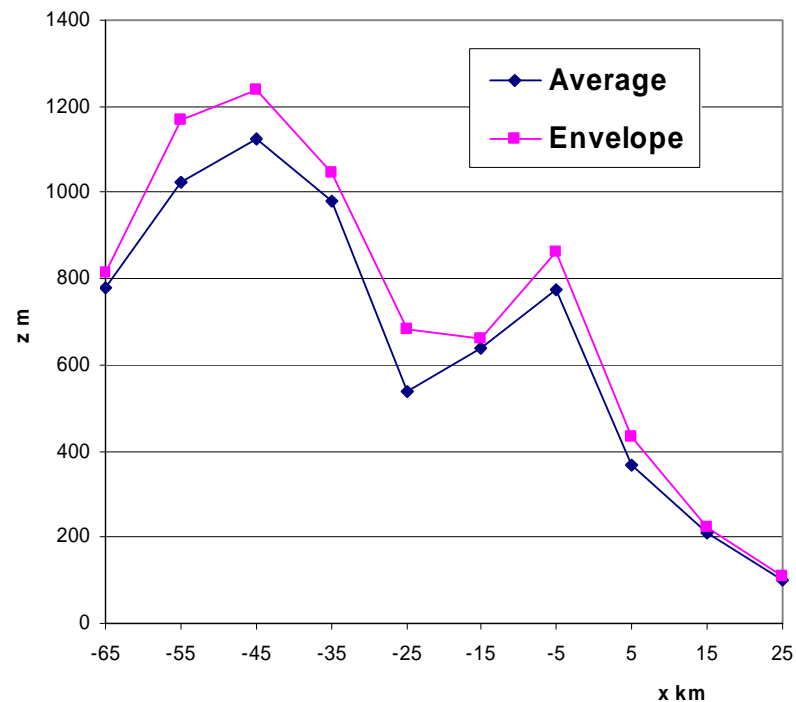

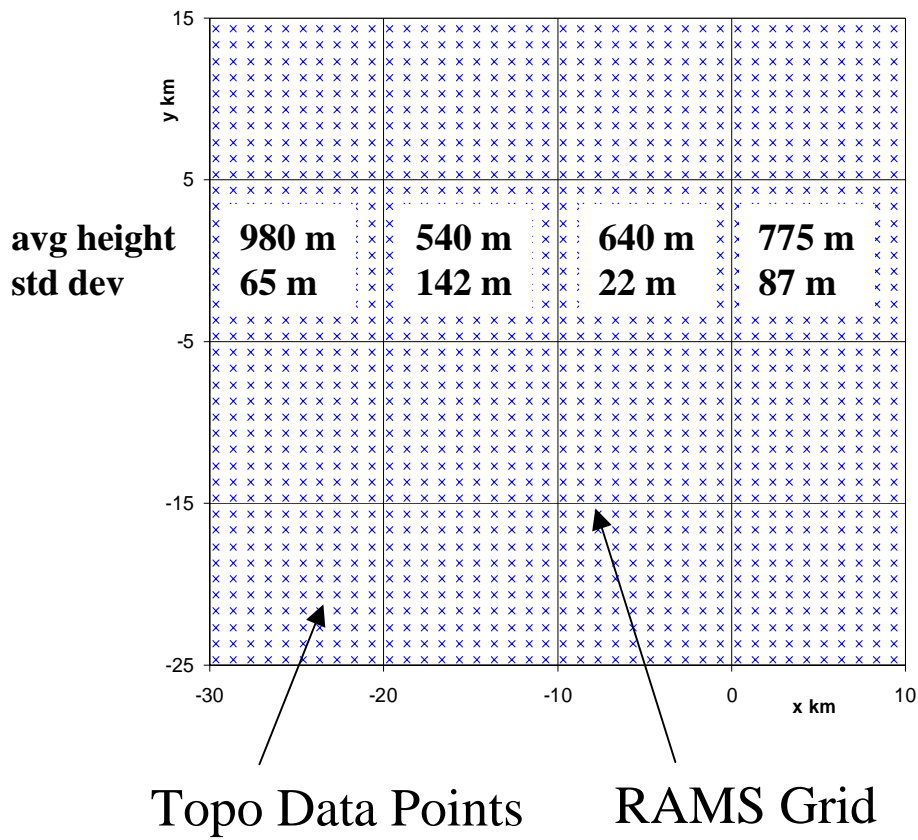

Silhouette Topography

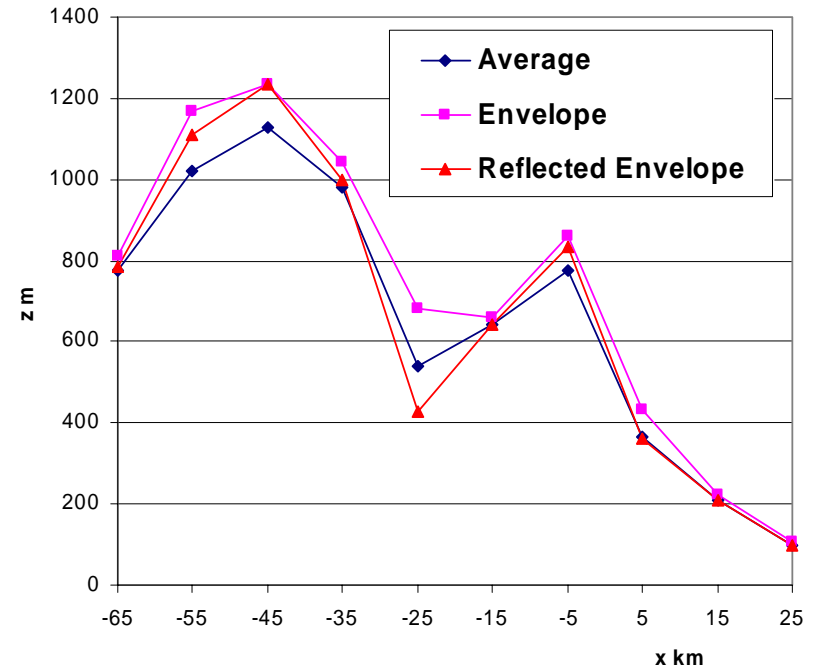

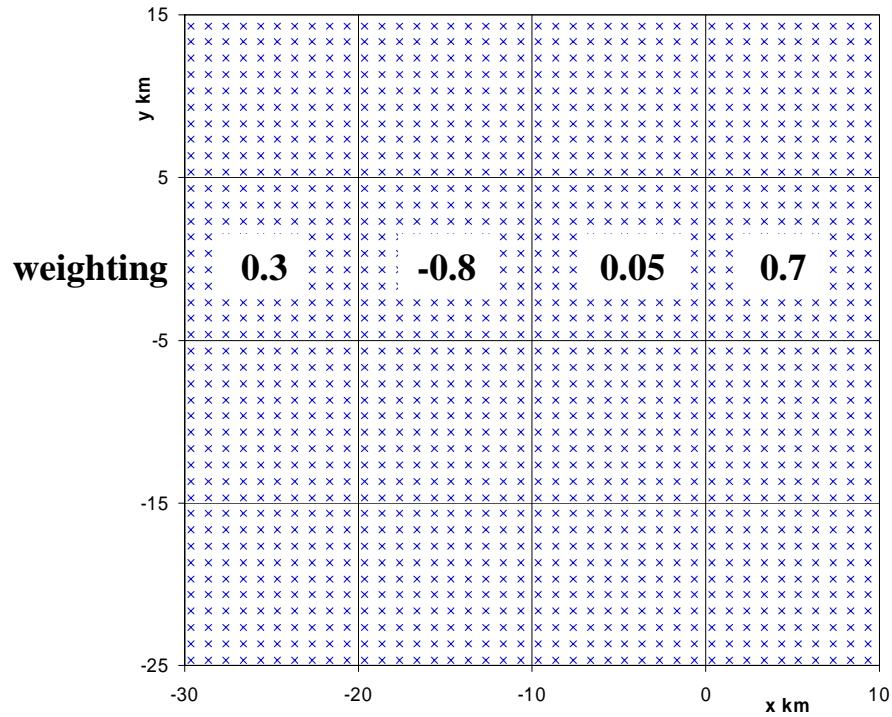

Envelope Orography

(Wallace et al, 1983)

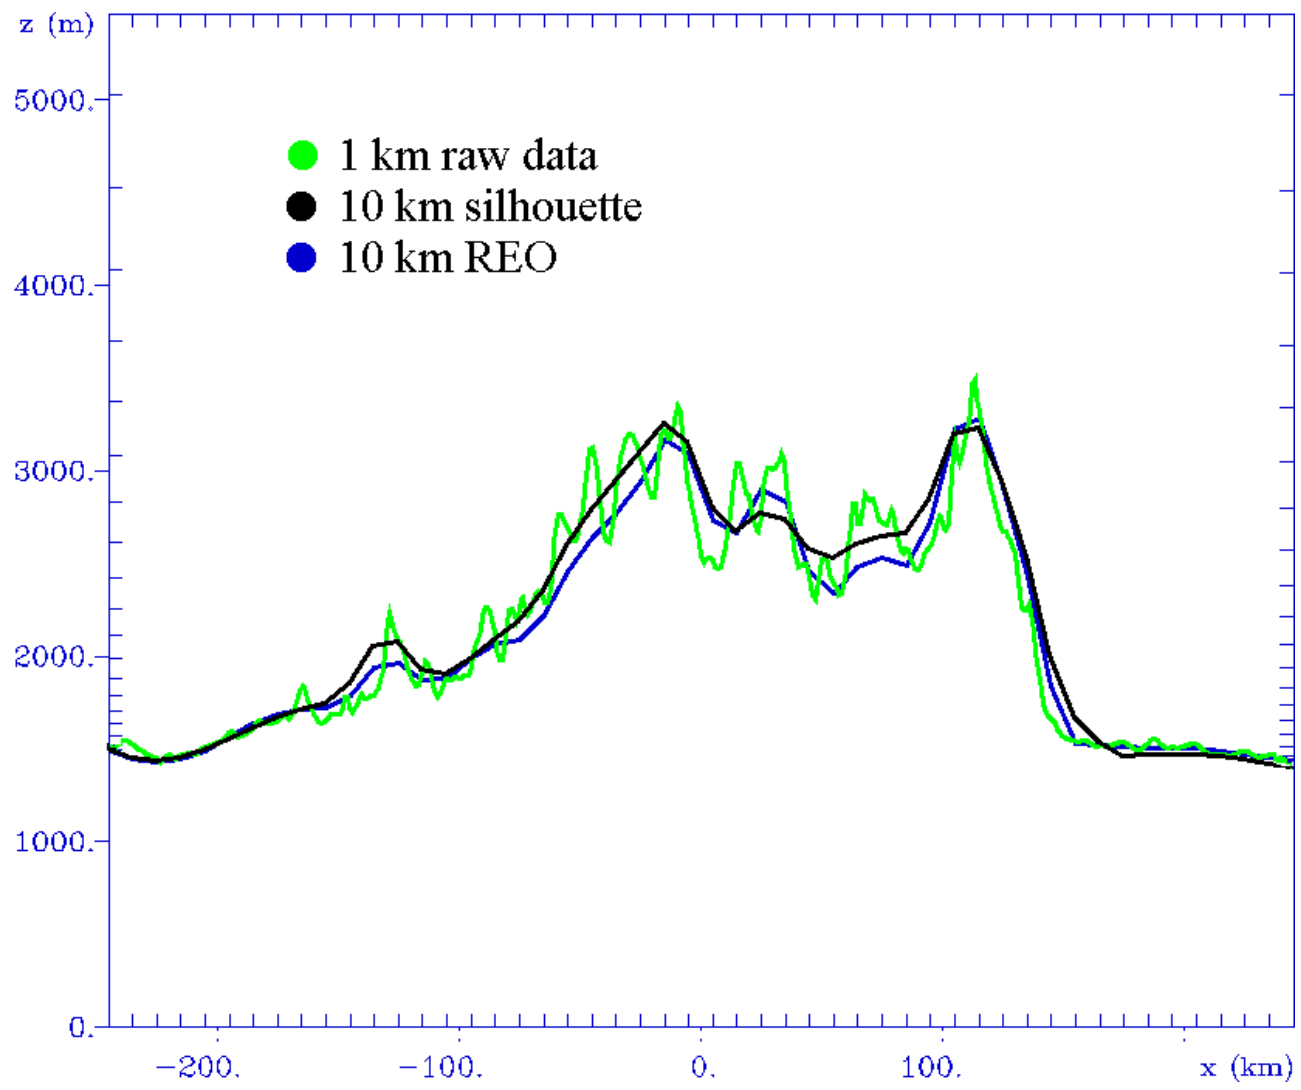

Reflected Envelope Orography

Reflected Envelope Orography

Sub-grid Topographic Roughness

$$z_{0t} = k \text{ sd}_{\text{topo}}$$

z_{0t} is the **topographic roughness length**

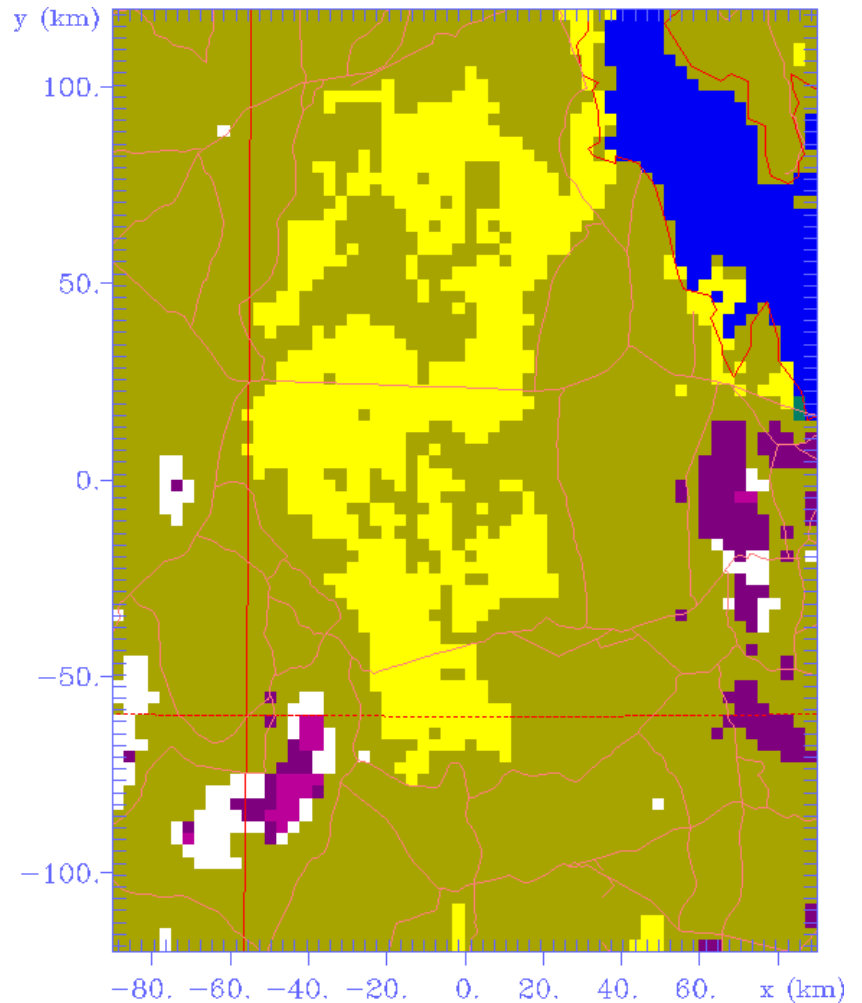

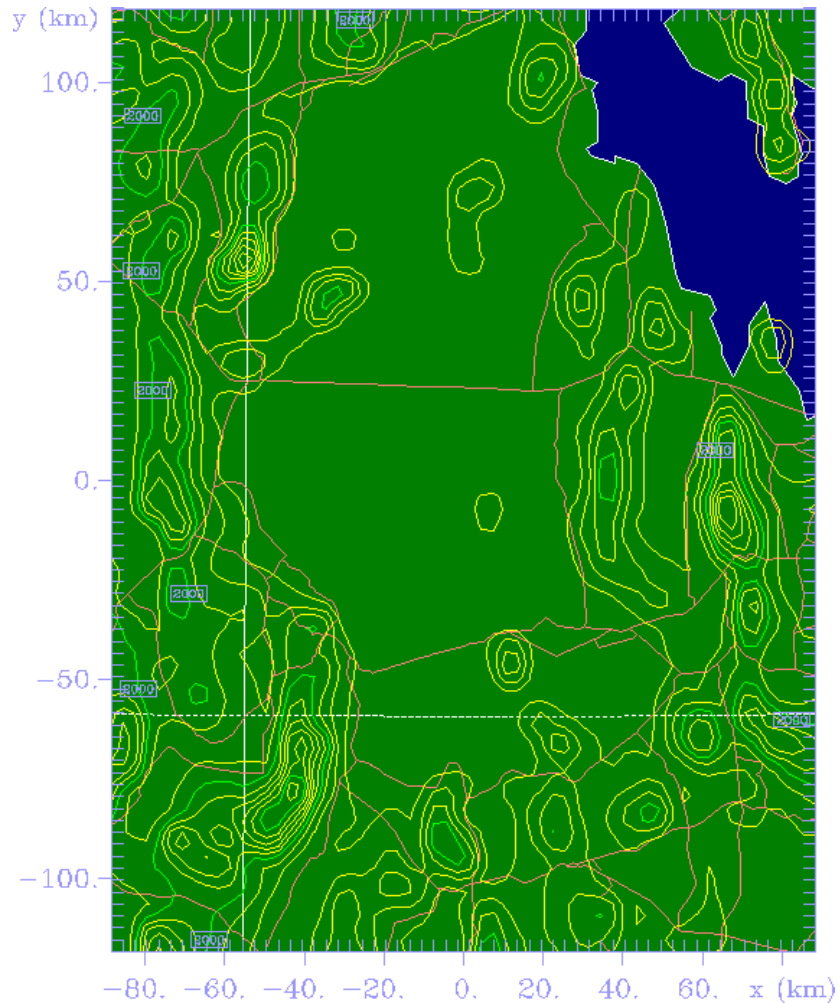

sd is the **standard deviation of topographic heights**

k is an empirical factor (0.005 - 0.02)

(Uno et al, 1995; Stull 1988)

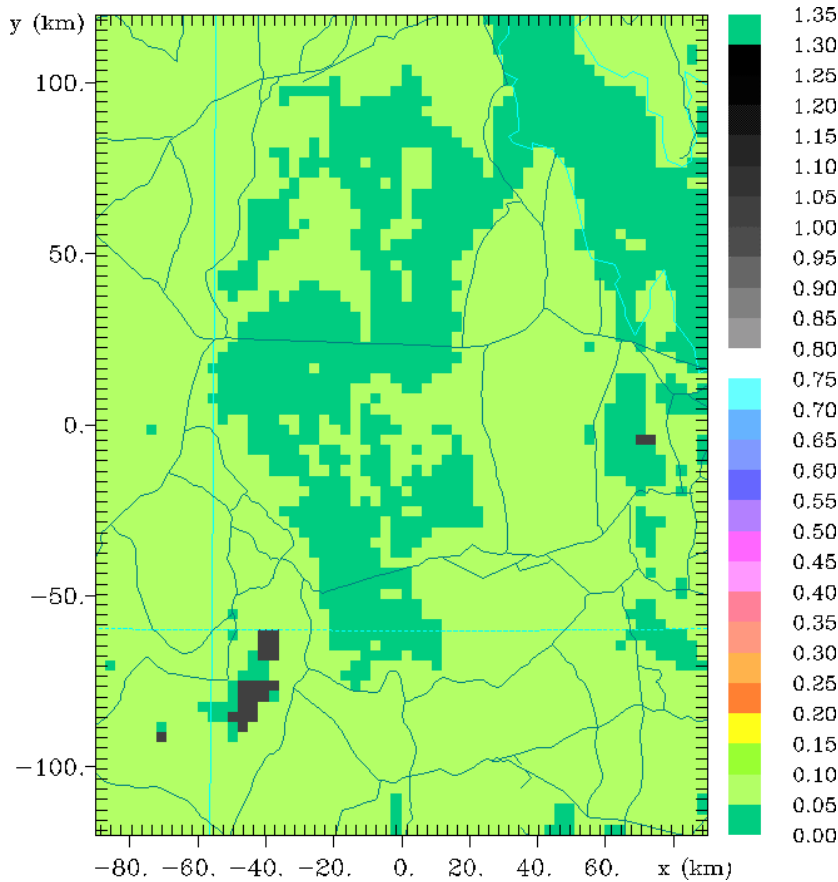

Topography and Vegetation - Utah

Modified Surface Roughness Field

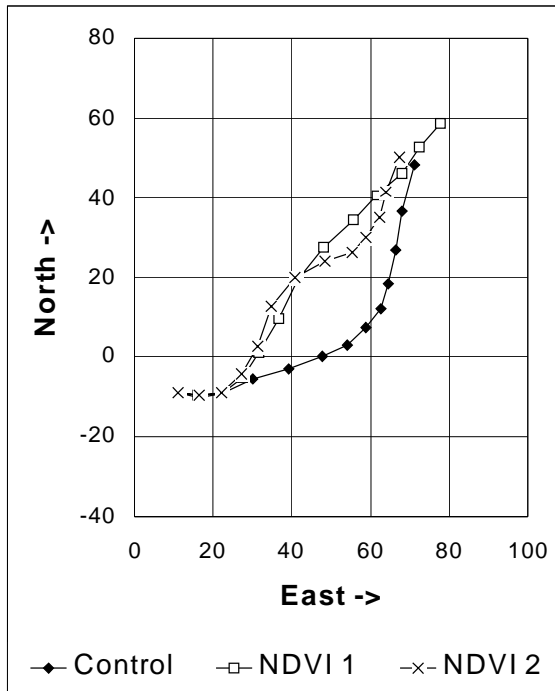

Vegetation Only

Vegetation and Topographic

Effect on Dispersion

RAMS Cartesian Gradient Computation

RAMS Cartesian Gradient Computation

- Gradient computation changed to evaluate finite difference along Cartesian level
- Requires vertical interpolation from sigma-z to z levels
- Special handling required near the surface

Status

- Horizontal diffusion scheme modified, significant improvements in vertical grid spacing allowed
- Advection and pressure gradient terms may still be suspect.

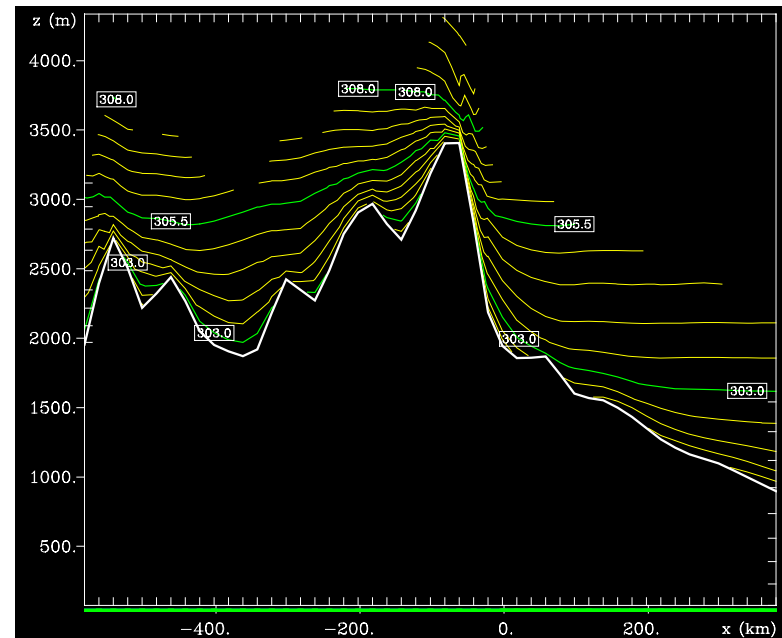

OLD vs. NEW horizontal diffusive gradients

Dz=150m ; dx=20 km; 2 hour simulation

topo test		Grid 1				
y =	-30. km	1999-02-09-0200 UTC 0 s	min	max	inc	lab*
contours	potential temp (K)		301.0	309.5	0.5000	1e 0
